When Donors are like Cab Drivers: How the Framing of Impact Information affects Donations

Joshua Lewis, Deborah Small

Motivation

Effective altruists argue that we should donate most when our donations are most efficient. But what if donors respond to impact information less like effective altruists, and more like NYC cab drivers? They might target a specific level of impact, and donate however much is required to meet that target, thus donating most when their donations are least efficient. We test whether framing impact information as “units of impact per dollar” or “dollars per unit of impact” leads to more efficient donation decisions.

MTurk Study (N = 600)

Procedure:
1. Participants were briefly introduced to a foodbank charity
2. Participants made two donation decisions, each with a $0.30 budget
3. We subsidized each decision by a different amount
4. Participants made each decision after seeing how many meals their donations would buy with the given subsidy.

Conditions:
2 (framing: dollars per meal vs. meals per dollar; between subjects) by 2 (cost-effectiveness: expensive vs. cheap; within subjects)

Cost-Effectiveness (within subjects)

<table>
<thead>
<tr>
<th>Expensive</th>
<th>Cheap</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dollars per meal</td>
<td>1 meal for every 10 cents</td>
</tr>
<tr>
<td>Meals per dollar</td>
<td>10 meals per dollar</td>
</tr>
</tbody>
</table>

Framing (between subjects)

<table>
<thead>
<tr>
<th>Dollars per meal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Meals per dollar</td>
</tr>
</tbody>
</table>

Dollars per meal condition

Participants target whole numbers of meals

Meals per dollar condition

No evidence of impact targeting

Findings

In the dollars per meal condition, people donate more when meals are expensive — but in the meals per dollar condition, the effect reverses.

Conclusion

- Giving donors information on the impact of their donations can lead to less efficient donation decisions
- However, this result depends on how the information is framed
- Charitable organizations should frame information about the impact of donations carefully
